

Wyoming Judicial Retirement System

Actuarial Valuation Report
for the Year Beginning January 1, 2024

May 30, 2024

Board of Trustees
Wyoming Judicial Retirement System
6101 Yellowstone Road
Suite 500
Cheyenne, WY 82002

Dear Board of Trustees:

Subject: Actuarial Valuation as of January 1, 2024

We are pleased to present the report of the actuarial valuation of the Wyoming Judicial Retirement System (“the Fund”) for the plan year commencing January 1, 2024. This report describes the current actuarial condition of the Fund, determines the calculated employer contribution rate (the actuarially determined contribution rate), and analyzes changes in this contribution rate from the prior year. Valuations are prepared annually, as of January 1, the first day of the Fund’s plan year.

This report was prepared at the request of the Board and is intended for use by the Retirement System and those designated or approved by the Board. This report may be provided to parties other than the System only in its entirety and only with the permission of the Board. GRS is not responsible for unauthorized use of this report.

Financing Objectives and Funding Policy

The employer and employee contribution rates are specified in the statute. The purpose of this actuarial valuation is to determine whether or not this statutory contribution is sufficient to meet the obligations of the Fund. This report should not be relied on for any purpose other than the purposes described herein. Determinations of financial results, associated with the benefits described in this report, for purposes other than those identified above may be significantly different.

This valuation assumed the continuing ability of the plan sponsor to make the contributions necessary to fund this plan. A determination regarding whether or not the plan sponsor is actually able to do so is outside our scope of expertise and was not performed.

Progress Toward Realization of Financing Objectives

The funded ratio (the ratio of the actuarial value of assets to the actuarial accrued liability) is a standard measure of a plan's funded status. The funded ratio as of January 1, 2024 is 100.89%. This funded ratio assumes that no future cost-of-living increases will be paid. In the January 1, 2023 valuation, this funded ratio was 99.12%. On a market value of assets basis, the funded ratio increased from 95.92% as of January 1, 2023, to 101.63% as of January 1, 2024. The funded status alone is not appropriate for assessing the need for future contributions. The funded status is also not appropriate for assessing the sufficiency of plan assets to cover the estimated cost of settling the plan's benefit obligations.

Benefit Provisions

The benefit provisions reflected in this valuation are those, which were in effect on January 1, 2024. W.S. 9-3-454 prohibits benefit changes, including cost-of-living increases, unless the funded ratio stays above 100% plus a margin for adverse experience throughout the life of the benefit change. Therefore, this valuation does not include any liability for future cost increases. There were no benefit changes since the prior valuation.

The benefit provisions are summarized in Appendix B of the report.

Assumptions and Methods

Actuarial assumptions and methods are set by the Board, based upon recommendations made by the plan's actuary. The current assumptions used in the actuarial valuation were adopted by the Board at the November 17, 2021 and February 17, 2022 meetings and were first utilized with the January 1, 2022 valuation report. For a detailed description of the experience related to these assumptions, as well as the rationale for any changes, please see our latest Wyoming Retirement System Actuarial Experience Study Report that covered the five-year investigation period ending December 31, 2020. All actuarial assumptions used in this report are reasonable for the purposes of this valuation. Furthermore, the assumptions and methods used in this valuation follow the guidance in the applicable Actuarial Standards of Practice and are expected to have no significant bias.

The results of the actuarial valuation are dependent upon the actuarial assumptions used. Actual results can and almost certainly will differ, as actual experience deviates from the assumptions. Even seemingly minor changes in the assumptions can materially change the liabilities, calculated contribution rates and funding periods. The actuarial calculations presented in the report are intended to provide information for rational decision making.

This report was prepared using our proprietary valuation model and related software which in our professional judgment has the capability to provide results that are consistent with the purposes of the valuation and has no material limitations or known weaknesses. We performed tests to ensure that the model reasonably represents that which is intended to be modeled.

Assumptions and Methods (Continued)

The 9.22% employee contribution and the 14.50% employer contribution are the rates that comply with State law. Pursuant to Senate Enrolled Act No. 13, effective July 1, 2024, the employee contribution rate will increase to 11.47%. Due to the many factors affecting a retirement system, users of this report should be aware that contributions made at that rate do not necessarily guarantee long-term benefit security.

The employer contribution requirement in Table 1 of this report is determined using the actuarial assumptions and methods disclosed in Appendix A of this report. This report does not include a detailed assessment of the risks of future experience not meeting the actuarial assumptions. Additional assessment of risks was outside the scope of this assignment. We encourage a review and assessment of investment and other significant risks that may have a material effect on the plan's financial condition.

All assumptions and methods are described in Appendix A of the report.

Data

Member data for retired, active, and inactive members was supplied as of January 1, 2024 by the Fund's staff. We did not audit this data, but we did apply a number of tests to the data, and we concluded that it was reasonable and consistent with the prior year's data.

Asset and financial information as of January 1, 2024 was prepared by Wyoming Retirement System and is the responsibility of management. Eide Bailly, LLP provided us the asset and financial information and will opine on Wyoming Retirement System's statements.

We are not responsible for the accuracy or completeness of the information provided by the System's staff.

Plan Experience

As part of each valuation, we examine the Fund's experience relative to the assumptions. As experience in a given year deviates from the assumptions, a gain occurs if the liabilities grow slower than the assumption set anticipates and a loss occurs if the liabilities grow faster. Overall, the Fund had a total experience gain of \$738,496 including an investment gain of \$902,353, a contribution loss of \$228,882 and a liability gain of \$65,025. The aggregate results of these analyses are disclosed in Tables 4 and 5 under Section III of the report.

Actuarial Certification

All of the tables contained in this actuarial valuation report were prepared by Gabriel, Roeder, Smith & Company. Historical information for years prior to 2010 was prepared by the prior actuarial firm and was not subjected to our actuarial review.

We certify that the information presented herein is accurate and fairly portrays the actuarial position of the Fund as of January 1, 2024.

All of our work conforms with generally accepted actuarial principles and practices, and with the Actuarial Standards of Practice issued by the Actuarial Standards Board. In our opinion, our calculations also comply with the requirements of state law and, where applicable, the Internal Revenue Code and ERISA.

The undersigned are independent actuaries and consultants. Thomas Lyle and Dana Woolfrey are Enrolled Actuaries and Paul Wood, Thomas Lyle, Dana Woolfrey and Karli Fehrman are Members of the American Academy of Actuaries, and all four meet all the Qualification Standards of the American Academy of Actuaries.

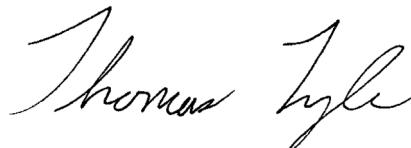

Finally, all of the undersigned are experienced in performing valuations for large public retirement systems.

Respectfully submitted,

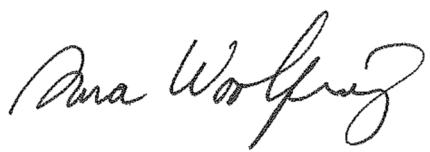

Gabriel, Roeder, Smith & Company

Paul T. Wood, ASA, FCA, MAAA
Senior Consultant

Thomas Lyle, FSA, FCA, EA, MAAA

EXECUTIVE SUMMARY

Executive Summary

Item	January 1, 2024	January 1, 2023
	No COLA	No COLA
1. Contributions:		
a. Total normal cost	24.840%	24.920%
b. Employee contributions*	(10.345%)	(9.220%)
c. Net employer normal cost	14.495%	15.700%
d. Amortization payment	(0.060%)	0.620%
e. Administrative expenses	0.460%	0.430%
f. Actuarially determined contribution	14.895%	16.750%
g. Statutory	(14.500%)	(14.500%)
h. Shortfall/(surplus)	0.395%	2.250%
2. Funding Elements:		
a. Market value of assets (MVA)	\$45,200,577	\$40,373,252
b. Actuarial value of assets (AVA)	\$44,873,246	\$41,717,146
c. Actuarial accrued liability (AAL)	\$44,476,097	\$42,089,372
d. Unfunded/(overfunded) actuarial accrued liability	(\$397,149)	\$372,226
3. Contributions and Ratios:		
a. Actuarially determined contribution	\$1,338,943	\$1,465,658
b. Actual contributions	N/A	1,258,235
i. Employer	N/A	1,258,171
ii. Other	N/A	64
c. Percentage contributed	N/A	85.85%
d. Funded ratio on an actuarial basis (AVA/AAL)	100.89%	99.12%
e. Funded ratio on a market basis (MVA/AAL)	101.63%	95.92%
f. Covered payroll	\$8,989,364	\$8,749,585

*The contribution rates are blended based on Senate Enrolled Act No. 13. Employee contribution rates will increase to 11.47% on July 1, 2024.

SECTION II

DISCUSSION

Contribution Requirements

- Exhibits throughout this report are based primarily, unless stated otherwise, on the assumption of no future cost-of-living adjustments (COLAs).
- W.S. 9-3-454 prohibits benefit changes, including cost-of-living increases, unless the funded ratio stays above 100% plus a margin for adverse experience throughout the life of the benefit change. The actuarial value funded ratio is 100.89% and the market value funded ratio is 101.63%.
- There have not been any changes to the actuarial assumptions or methods since the prior valuation. For a detailed description of the experience related to these assumptions, as well as the rationale for any changes, please see our latest Wyoming Retirement System Actuarial Experience Study Report.
- An Actuarially Determined Contribution (ADC) is calculated as part of this valuation. Because contribution rates are set in statutes, the ADC could be thought of as a metric to which one could compare the statutory rate. The amortization payment for the purpose of calculating the ADC is based upon the following assumptions:
 - The funding period is based on a 15-year closed period for the initial base as of January 1, 2018 and 15-year closed period layers for future gains and losses
 - Amortization payment amounts are calculated in such a way that they will increase as a level percentage of payroll
 - Total payroll increases are assumed at 3.75% per year
 - Future growth in the number of active members is not reflected in the annual valuation
- Analysis of the change in the ADC is shown in Table 5 under Section III of the report.
- Pursuant to Senate Enrolled Act No. 13, employee contribution rates will increase to 11.47% on July 1, 2024.
- The plan is fully funded as of January 1, 2024. In the January 1, 2023 valuation, the plan was not expected to reach full funding based on the Statutory rates in effect at that time and a projection of the market value of assets. Projection results were produced under a separate cover.

Calculation of Contribution Rates

The funds available to pay benefits come from two sources, contributions and investment income on those contributions (the majority of the funds available to pay benefits typically come from investment income). The Fund receives contributions from two sources, employer contributions and member contributions, both of which are determined as a percentage of pay. An Actuarially Determined Contribution (ADC) is calculated as part of this valuation. Because contribution rates are set in Statutes, the ADC could be thought of as a metric to which one could compare the Statutory rate. As shown in Table 1 under Section III of the report, the employer ADC has three components:

- The normal cost percentage (NC%)
- The amortization percentage (UAAL%)
- The administrative expenses

The NC% is the theoretical amount which would be required to pay the members' benefits if this amount had been contributed from each member's entry date and if the fund's experience exactly followed the actuarial assumptions. The NC% is shown in Table 3 under Section III of the report.

Members are required to make employee contributions and only the excess of the NC% over the member contribution rate is included in the employer contribution rate.

The actuarial accrued liability (AAL) is the difference between (i) the actuarial present value of all future benefits for all current participants of the fund, including active, inactive and retired members, and (ii) the actuarial present value of future normal costs. Thus, the AAL represents the liability associated with past years. The unfunded actuarial accrued liability (UAAL) is the difference between the AAL and the actuarial value of assets (AVA). It is the shortfall/excess between the liability associated with prior years (the AAL) and the assets actually accumulated (the AVA). This shortfall/excess can arise from several sources, including actuarial gains and losses which are caused by differences between actual experience and the plan's assumptions, changes to the plan's actuarial assumptions, and amendments to the benefit provisions.

The UAAL% is the amount required to fund this difference. It is the amount, expressed as a level percentage of payroll, necessary to amortize the UAAL. Amortization bases are established each year and amortized based on the Board's policy. The Board's policy for purposes of calculating the ADC consists of amortizing the unfunded liability as of January 1, 2018, over a closed 15-year period with each subsequent amortization base created as a result of year to year experience changes over individual 15-year closed periods. The Executive Summary shows the UAAL%, called Amortization Payment, compared to that of last year.

Administrative expenses are the average of the actual expenses for the prior two years, with each year projected at 2.50% to the valuation date.

The ADC is calculated for the twelve-month period beginning January 1, 2024. As of January 1, 2024, the statutory employer contribution is within 0.40% of meeting the ADC, the plan is fully funded, and a surplus is expected to persist for many years. The calculated ADC under the Board's funding policy can be considered a "Reasonable Actuarially Determined Contribution" as required by the Actuarial Standards of Practice.

Financial Data and Experience

As of January 1, 2024, the Fund has a total market value of \$45.2 million. Financial information was received from Eide Bailly, LLP.

Table 7 under Section III of the report shows a reconciliation of the market values between the beginning and end of 2023.

During 2023, the total investment return on the market value of assets (MVA) was 13.84%, as reported by Meketa Investment Group, Inc, as shown in Table 10 under Section III of the report.

In determining the contribution rates and funded status of the Fund, an actuarial value of assets (AVA) is used rather than the market value of assets. The actuarial value of assets is based on the market value of assets with a five-year phase-in of actual investment return in excess of (or less than) expected investment income. Expected investment income is determined using the assumed investment return rate and the market value of assets (adjusted for receipts and disbursements during the year). The returns are computed net of administrative and investment expenses. An adjustment is made if the actuarial value is not within 20% of the Market Value. For any year following a year in which the 20% of market value adjustment was applied, the actuarial value is determined as if the adjustment was not applied in the previous year.

The development of the AVA is shown in Table 9 under Section III of the report. The AVA is \$44.9 million. The AVA is 99.28% of the MVA as of December 31, 2023, compared to 103.33% last year. The difference between the AVA and the MVA is the deferred gains and losses. As of January 1, 2023, the total deferred loss was \$1,343,894. As of January 1, 2024, the total deferred gain is \$327,331. Having a deferred gain in the AVA is an indicator that the funded ratio will have an upward “tilt” in the near term, and the ADC will likewise have downward pressure.

In addition to the market return, Table 10 also shows the return on the actuarial value of assets for the Fund. For 2023, this return was 8.98%. Because this is greater than the assumed 6.80% investment return for the prior year, an actuarial gain occurred decreasing the unfunded actuarial accrued liabilities of the fund by \$0.9 million.

Member Data

Member data as of January 1, 2024 was supplied electronically by the Fund's staff. While we did not audit this data, we did perform various tests to ensure that it was internally consistent, consistent with the prior year's data, and was reasonable overall.

Table 15 under Section III of the report shows the number of members by category (active, inactive, retired, etc.) along with member statistics. Tables 16 through 23 show summaries of certain historical data and include membership statistics.

Total active member projected payroll increased 2.74% last year, compared with a 2.92% increase in the prior year.

The average of the final average salaries for participants who retired or became disabled this year is \$149,052.

The change in payroll is significant because the Fund receives its statutory contributions as a percent of pay. If payroll does not grow at the assumed rate, then fewer contributions will be made to the plan and the funding of the Fund will be delayed. Furthermore, the methodology used in the valuation to amortize the unfunded actuarial accrued liability assumes a growing payroll into the future. If the payroll does not grow at the assumed 3.75% per year average, then the current amortization payments may be understated and the funding position of the Fund will not strengthen as assumed over time. Higher than expected payroll growth, however, has the opposite effect and the funded position of the Fund should trend upward. Table 5 under Section III of the report shows, for the past year, payroll for the plan increased less than expected.

Of the 55 active participants, 17 are eligible or will become eligible for normal retirement in 2024, and 13 are eligible or will become eligible for early retirement in 2024.

Benefit Provisions

Appendix B of the report includes a more detailed summary of the benefit provisions for the Fund. A brief summary is as follows:

- *Normal Retirement Eligibility*
 - Age 70, age 65 with four or more years of service, or age 60 with 20 or more years of service.
- *Normal Retirement Benefit*
 - One-twelfth of the Final Average Salary times the sum of the following:
 - a) 4% for each of the first five years of service,
 - b) 3% for each year from and including the sixth year through the fifteenth year of service,
 - c) 2% for each year from and including the sixteenth year through the twentieth year of service,
 - d) 1% for each year thereafter.
- *Early Retirement Eligibility and Benefit*
 - Age 55 with four or more years of service. Normal retirement benefit reduced five percent for each year of retirement prior to age 65.
- *Normal Form of Payment* is a monthly benefit for life. Upon death, 50% of the benefit continues to be paid to the beneficiary.
- *Employee Contributions* are required
 - 9.22% of pay.
- *Post-retirement Cost-of-Living Adjustments (COLAs)*
 - W.S. 9-3-454 prohibits benefit changes, including cost-of-living increases, unless the funded ratio stays above 100% plus a margin for adverse experience throughout the life of the benefit change.

Pursuant to Senate Enrolled Act No. 13, the employee contribution rate will increase to 11.47% on July 1, 2024.

Actuarial Methods and Assumptions

Appendix A of the report includes a summary of the actuarial assumptions and methods used in this valuation. A few highlights are listed as follows:

- Costs are determined using the Entry Age Normal actuarial cost method, calculated as a level percentage of payroll.
- The unfunded actuarial accrued liability is amortized over an effective 10 year closed period as a level percent of payroll. Future valuations will include additional amortization layers on a closed 15-year basis.
- The assumed annual investment return rate is 6.80%, with assumed inflation of 2.25%.
- Payroll is assumed to increase at 3.75% per year.
- Inactive vested participants are assumed to retire at age 65 or on the valuation date if over age 65.
- No benefit data is available for members entitled to deferred benefits. The present value of benefits expected to be paid to vested inactive non-retired members is approximated using the data provided.

The average future lifetime for current pensioners is 14.7 years.

The actuarial assumptions and methods were reviewed in detail as part of the 2021 Experience Study covering the five-year period ending December 31, 2020. Please see Appendix A for a summary of these assumptions.

GASB and Funding Progress

Governmental Accounting Standards Board Statement Number 67 (GASB 67) contains certain accounting requirements for the Fund. Schedules, notes and required supplementary information are provided under separate cover.

SECTION III

SUPPORTING EXHIBITS

Table 1A
Calculation of Actuarially Determined Employer Contribution Rate
(Assumes No Future Cost-Of-Living Increases)

Item	January 1, 2024	January 1, 2023
1. Projected valuation payroll	\$8,989,364	\$8,749,585
2. Present value of future pay	\$78,011,723	\$73,574,086
3. Employer normal cost rate	14.50%	15.70%
4. Actuarial accrued liability for active members		
a. Present value of future benefits for active members	\$34,983,299	\$34,332,271
b. Less: present value of future employer normal costs	(9,588,195)	(9,992,762)
c. Less: present value of future employee contributions	(8,070,313)	(6,783,531)
d. Actuarial accrued liability	\$17,324,791	\$17,555,978
5. Total actuarial accrued liability for:		
a. Retirees and beneficiaries	\$25,953,991	\$23,397,019
b. Disabled members	0	0
c. Inactive members	\$1,197,315	1,136,375
d. Active members (Item 4d)	17,324,791	17,555,978
e. Total	\$44,476,097	\$42,089,372
6. Actuarial value of assets (Table 9)	\$44,873,246	\$41,717,146
7. Unfunded actuarial accrued liability (UAAL) (Item 5e - Item 6)	(\$397,149)	\$372,226
8. Effective UAAL amortization period	N/A	10 years
9. Assumed payroll growth rate	3.75%	3.75%
10. Actuarially Determined Employer Contribution		
a. UAAL amortization payment as % of pay	-0.06%	0.62%
b. Employer normal cost	14.50%	15.70%
c. Administrative expense	0.46%	0.43%
d. Employer Contribution (a + b + c)	14.90%	16.75%

Table 1B
Calculation of UAAL Amortization Payment
(Assumes No Future Cost-Of-Living Increases)

UAAL as of January 1, 2024					(\$397,149)
Total Prior Remaining Amortization Bases as of January 1, 2024					\$341,347
2024 Amortization Base as of January 1, 2024					(\$738,496)
2024 Payment (15 years, level percent of pay amortization)					(\$61,834)
				As of January 1, 2024	
Base Year	Initial Base	Remaining Base	Years Remaining	Amortization Payment	
2024 Experience Gain	\$ (738,496)	\$ (738,496)	15	\$ (61,834)	
2023 Experience Gain	(325,341)	(319,313)	14	(28,262)	
2022 Experience Gain	(1,994,240)	(1,911,351)	13	(179,735)

Table 2
Cost Breakdown
(Assumes No Future Cost-Of-Living Increases)

Item	Present Value of Future Normal Costs (1)	Actuarial Accrued Liabilities (2)	Total Present Value of Benefits (3) = (1) + (2)
Age and service allowances based on total service and disability benefits likely to be rendered by present active members	\$17,318,670	\$17,109,554	\$34,428,224
Death-in-service benefits likely to be paid on behalf of present active members (employer financed portion)	317,579	204,178	521,757
Separation benefits (refunds of contributions and deferred allowances) likely to be paid to present active members	22,259	11,059	33,318
Benefits likely to be paid to vested inactive members	\$0	1,197,315	1,197,315
Benefits to be paid to members due refunds	\$0	\$0	\$0
Benefits to be paid to current retirees, disabled members, beneficiaries, and future beneficiaries of current retirees	\$0	25,953,991	25,953,991
Total	\$17,658,508	\$44,476,097	\$62,134,605
Actuarial value of assets	397,149	44,476,097	44,873,246
Liabilities to be covered by future contributions	\$17,261,359	\$0	\$17,261,359

Table 3
History of Total Normal Cost
(Assumes No Future Cost-Of-Living Increases)

Fiscal Year Ending December 31	Total Normal Cost as Percent of Payroll
2007	15.24%
2008	14.76%
2009	18.45%
2010	19.05%
2011	18.88%
2012	18.94%
2013	19.03%
2014	19.10%
2015	19.14%
2016	19.07%
2017	19.06%
2018	22.14%
2019	22.28%
2020	22.23%
2021	22.39%
2022	24.82%
2023	24.92%
2024	24.84%

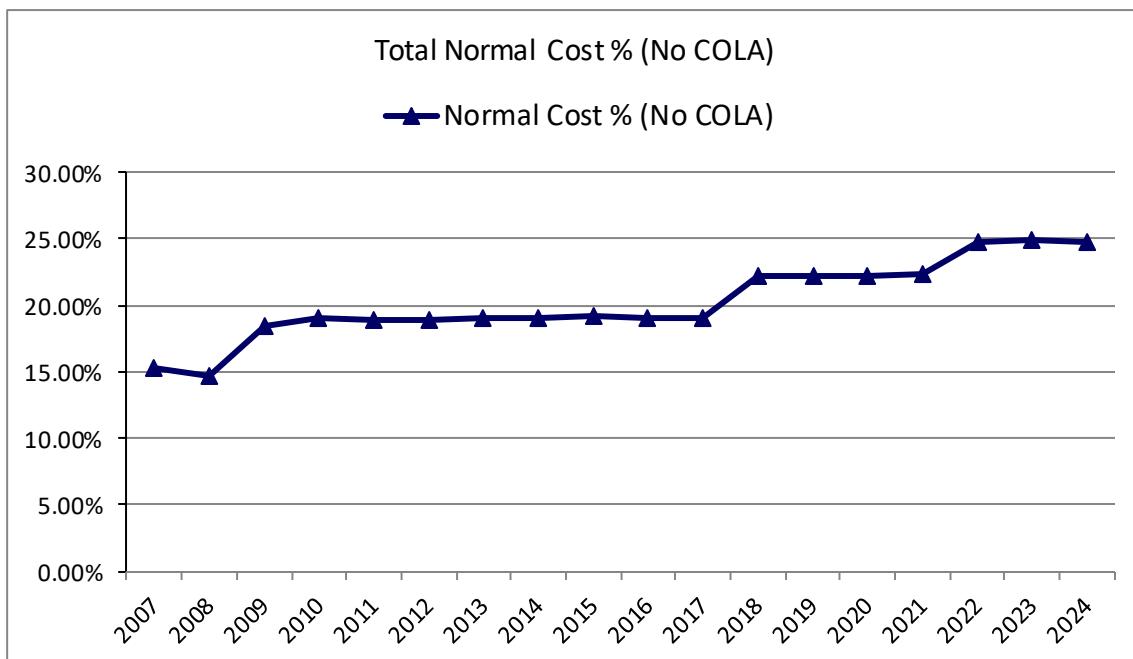

Table 4
Calculation of Total Actuarial Gain/(Loss)
(Assumes No Future Cost-Of-Living Increases)

Item	January 1, 2024
1. Derivation of Experience Gain/(Loss)	
a. Unfunded actuarial accrued liability (UAAL) - previous valuation	\$372,226
b. Normal cost (NC) for fiscal year ending December 31, 2023	2,179,999
c. Expected administrative expenses for fiscal year ending December 31, 2023	38,000
d. Actuarially determined contribution for fiscal year ending December 31, 2023	2,272,371
e. Interest accrual:	
(i) For whole year on (a)	25,311
(ii) For half year on (b) + (c) - (d)	(1,818)
(iii) Total interest: (e)(i) + (e)(ii)	23,493
f. Change in UAAL due to plan changes	-
g. Change in UAAL due to assumption change	-
h. Expected UAAL current year: (a) + (b) + (c) - (d) + (e)(iii) + (f) + (g)	341,347
i. Actual UAAL current year	(397,149)
j. Experience gain/(loss): (h) - (i)	738,496
k. Experience gain/(loss) as a % of actuarial accrued liability	1.66%
2. Approximate Portion of Gain/(Loss) Due to Investments (at Actuarial Value)	\$902,353
3. Approximate Portion of Gain/(Loss) Due to Contributions higher or lower than expected	(\$228,882)
4. Approximate Portion of Gain/(Loss) Due to Liabilities: (1)(j) - (2) - (3)	\$65,025
a. Age & service retirements	(\$140,470)
b. Disability retirements	\$1,203
c. Death-in-service	\$370
d. Withdrawal from employment	\$9,707
e. Rehires and new hires	(\$25,919)
f. Pay increases	\$330,025
g. Death after retirement	(\$32,526)
h. Service Purchases	-
i. Other	(77,365)
j. Other as a % of actuarial accrued liability	-0.17%

Table 5
Change in Calculated Contribution Rate Since the Prior Valuation
(Assumes No Future Cost-Of-Living Increases)

Item	January 1, 2024
1. Calculated contribution rate as of January 1, 2023	16.75%
2. Change in contribution rate during year	
a. Change in employer normal cost	-0.08%
b. Change in employee contributions*	-1.12%
c. Assumption changes	0.00%
d. Actuarial (gain) loss from investments on actuarial value of assets	-0.83%
e. Actuarial (gain) loss from liability sources and administrative expenses	-0.03%
f. Difference between contributions made and required contributions	0.21%
g. Effect of payroll growing slower/(faster) than assumption	0.00%
h. Other changes	0.00%
j. Total change	<hr/> -1.85%
3. Calculated contribution rate as of January 1, 2024	14.90%

*Includes the impact of using the blended employee contribution rates for calendar year 2024.

* Employer contributions include other funding sources and employee contributions may include member service purchase contributions

** Net of investment expenses

Table 9
Development of Actuarial Value of Assets

Item	FYE 2023	FYE 2022
1. Actuarial value of assets, beginning of year (without corridor)	\$41,717,146	\$39,362,946
2. Market value, end of year	\$45,200,577	\$40,373,252
3. Market value, beginning of year	\$40,373,252	\$43,795,214
4. Non-investment/administrative net cash flow:		
a. Employee contributions	\$799,521	\$757,596
b. Employer contributions	1,258,171	1,191,444
c. Other contributions	64	59
d. Refund of employee accounts	-	-
e. Retirement benefits	(2,577,048)	(2,359,700)
f. Administrative expenses	(44,861)	(40,411)
g. Total net cash flow: [sum of (4a) through (4f)]	(\$564,153)	(\$451,012)
5. Investments and securities lending:		
a. Interest and dividends on investments	\$983,388	\$789,181
b. Gross income from securities lending	96,509	34,600
c. Fees and expenses	(326,781)	(258,921)
d. Total net income: [sum of (5a) through (5c)]	\$753,116	\$564,860
6. Investment income:		
a. Actual market return: (2) - (3) - (4g) - (5d)	\$4,638,362	(\$3,535,810)
b. Assumed rate of return	6.80%	6.80%
c. Assumed amount of return	1,973,399	2,398,132
d. Amount subject to phase-in: (6a) - (6c)	\$2,664,963	(\$5,933,942)
7. Phase-in recognition of investment income:		
a. Current year: 0.20 * (6d)	\$532,993	(\$1,186,788)
b. First prior year	(1,186,788)	753,810
c. Second prior year	753,810	248,102
d. Third prior year	248,102	645,621
e. Fourth prior year	645,621	(618,525)
f. Total recognition	\$993,738	(\$157,780)
8. Actuarial value of assets, end of year		
a. Preliminary actuarial value of assets, end of year:		
(1) + (4g) + (5d) + (6c) + (7f)	\$44,873,246	\$41,717,146
b. Upper corridor limit: 120% * (2)	54,240,692	48,447,902
c. Lower corridor limit: 80% * (2)	36,160,462	32,298,602
d. Actuarial value of assets, end of year	\$44,873,246	\$41,717,146
9. Difference between market and actuarial value of assets	\$327,331	(\$1,343,894)
10. Actuarial rate of return	8.98%	7.17%
11. Market rate of return*	13.84%	-6.99%
12. Ratio of actuarial value to market value of assets	99.28%	103.33%

* Current year market rate of return is based on unaudited data and is supplied by the plan's investment

2049	5,247,545	739,409	5,986,954
2050	5,240,145	652,259	5,892,404
2051	5,251,031	572,931	5,823,962
2052	5,234,796	501,667	5,736,463
2053	5,226,092	438,406	5,664,497

* Includes Disabled Members, Beneficiaries, and Deferred Vested Members. Retirement benefit payments for deferred vested members are assumed to commence at age 65.

APPENDIX A

SUMMARY OF ACTUARIAL ASSUMPTIONS AND METHODS

Summary of Actuarial Assumptions and Methods

The following methods and assumptions were used in preparing the January 1, 2024 actuarial valuation report.

1. Valuation Date

The valuation date for any given year is January 1st, the first day of each plan year. This is the date as of which the actuarial present value of future benefits and the actuarial value of assets are determined.

2. Actuarial Cost Method

The actuarial valuation uses the Entry Age Normal (EAN) actuarial cost method, amortized as a level percentage of payroll. Under this method, the employer contribution rate is the sum of (i) the employer normal cost rate, and (ii) the rate that will amortize the unfunded actuarial accrued liability (UAAL).

- a. The valuation is prepared on the projected benefit basis, under which the present value, at the investment return rate assumed to be earned in the future (currently 6.80%), of each participant's expected benefit payable at retirement or death is determined, based on his/her age, service, sex and compensation. The calculations take into account the probability of a participant's death or termination of employment prior to becoming eligible for a benefit, as well as the possibility of his/her terminating with a service, disability, or survivor's benefit. Future salary increases are also anticipated. The present value of the expected benefits payable for the active participants is added to the present value of the expected future payments to retired participants and beneficiaries to obtain the present value of all expected benefits payable from the Fund on account of the present group of participants and beneficiaries.
- b. The employer contributions required to support the benefits of the Fund are determined using a level funding approach, and consist of a normal cost contribution and an unfunded accrued liability contribution.
- c. The normal cost contribution is determined using the "entry age normal" actuarial cost method. Under this method, a calculation is made to determine the average uniform and constant percentage rate of employer contribution which, if applied to the compensation of each new participant during the entire period of his/her anticipated covered service, would be required to meet the cost of all benefits payable on his/her behalf based on the benefits provisions applicable for the individual member.
- d. The unfunded actuarial accrued liability contributions are determined by subtracting the actuarial value of assets from the actuarial accrued liability and amortizing the result over 15 years from the valuation date. The Board's policy consists of amortizing the unfunded liability as of January 1, 2018, over a closed 15-year period with each subsequent amortization base created as a result of year to year experience changes over individual 15-year closed periods. The current year amortization base is determined by taking the current unfunded liability less the outstanding amounts of prior year bases.

Summary of Actuarial Assumptions and Methods (continued)

3. Actuarial Value of Assets

The actuarial value of assets is based on the market value of assets with a five-year phase-in of actual investment return in excess of (less than) expected investment income, with interest, dividends, and other income recognized immediately. Expected investment income is determined using the assumed investment return rate and the market value of assets (adjusted for receipts and disbursements during the year). The returns are computed net of administrative and investment expenses. An adjustment is made if the actuarial value is not within 20% of the Market Value. For any year following a year in which the 20% of market value adjustment was applied, the actuarial value is determined as if the adjustment was not applied in the previous year.

4. Economic Assumptions

a. Investment return

6.80% per year, compounded annually, composed of an assumed 2.25% inflation rate and a 4.55% net real rate of return. This rate represents the assumed return, net of investment expenses.

b. Salary increase rate

3.75% per annum

c. Payroll growth rate

In the amortization of the unfunded actuarial accrued liability, payroll is assumed to increase 3.75% per year. This increase rate is solely due to the effect of inflation on salaries, with no allowance for future membership growth.

d. Cost-of-Living adjustment

No cost-of-living adjustment is assumed since the policy for providing the benefit requires Board approval to make the recommendation to the Joint Appropriations Committee and the funded level of the plan shows a cost-of-living requirement would not be permitted.

Summary of Actuarial Assumptions and Methods (continued)

5. Demographic Assumptions

a. Mortality

b. Healthy Pre-Retirement Mortality:

Pub-2010 General Active Mortality Table, amount weighted, fully generational, projected with the MP-2020 Ultimate Scale

Males: No set back with a multiplier of 100%

Females: No set back with a multiplier of 100%

Healthy Post-Retirement Mortality:

Pub-2010 General Healthy Annuitant Mortality Table, amount weighted, fully generational, projected with the MP-2020 Ultimate Scale

Males: No set back with a multiplier of 100%

Females: No set back with a multiplier of 103%

Disabled Mortality

Pub-2010 General Disabled Retiree Mortality Table, amount weighted, fully generational, projected with the MP-2020 Ultimate Scale

Males: No set back with a multiplier of 100%

Females: No set back with a multiplier of 100%

Age	Pre-Retirement		Post-Retirement		Disabled	
	Projected to 2024 using the MP-2020 Ultimate Scale					
	Male	Female	Male	Female	Male	Female
20	0.03%	0.01%	0.03%	0.01%	0.34%	0.19%

61	2%	70	100%
62	2%	71	100%
63	2%	72	100%

Summary of Actuarial Assumptions and Methods (continued)

6. Other Assumptions

- a. Percent married: 85% of employees are assumed to be married. (No beneficiaries other than the spouse assumed.)
- b. Age difference: Male members are assumed to be three years older than their spouses, and female members are assumed to be three years younger than their spouses.
- c. Percent electing annuity on death (when eligible): All of the spouses of vested, married participants are assumed to elect an annuity.
- d. Percent electing deferred termination benefit: Vested terminating members are assumed to elect a refund or a deferred benefit, whichever is more valuable at the time of termination.
- e. Assumed age for commencement of deferred benefits: Members electing to receive a deferred benefit are assumed to commence receipt at the first age at which unreduced benefits are available, which for this plan is age 65.
- f. No benefit amount data is available for members entitled to deferred benefits. The benefit is estimated using the final average compensation and service provided by WRS.
- g. There will be no recoveries once disabled.
- h. No surviving spouse will remarry.
- i. Administrative expenses: Average of actual expenses for the prior two years, with each year projected at 2.50% to the valuation date.
- j. Pay increase timing: Beginning of (fiscal) year. This is equivalent to assuming that reported pay represents amount paid to members during the year ended on the valuation date.
- k. Decrement timing: Decrements of all types are assumed to occur mid-year.
- l. Eligibility testing: Eligibility for benefits is determined based upon the age nearest birthday and service nearest whole year on the date the decrement is assumed to occur.
- m. Decrement relativity: Decrement rates are converted to probabilities in order to account for multiple decrements.
- n. Incidence of Contributions: Contributions are assumed to be received continuously throughout the year based upon the computed percent of payroll shown in the report, and the actual payroll payable at the time contributions are made.
- o. Benefit Service: All members are assumed to accrue one year of service each year. Exact fractional service is used to determine the amount of benefit payable.
- p. Employee contribution pickup: For members hired after January 1, 2018, it is assumed that 40% of the employee contributions were paid by employee and therefore would be refundable.

APPENDIX B

SUMMARY OF PLAN PROVISIONS

Summary of Plan Provisions

Covered Members	Any justice of the supreme court, district judge appointed or circuit court judge appointed to any of those offices on or after July 1, 1998, or who elects to participate in the judicial retirement program under this act in accordance with W.S. 9-3-713.
Final Average Salary	Employee's average annual salary for the highest paid three continuous years of service.
Form of Payment	Monthly benefit for life. Upon death, 50% of the benefit continues to be paid to the beneficiary.
Service Retirement	
Eligibility	Age 70 with continuous service from appointment, age 65 with four or more years of service, or age 60 with 20 or more years of service.
Monthly Benefit	Highest Average Salary times the sum of the following: <ul style="list-style-type: none">a) 4% for each of the first five years of service,b) 3% for each year from and including the sixth year through the fifteenth year of service,c) 2% for each year from and including the sixteenth year through the twentieth year of service,d) 1% for each year thereafter.
Vesting	Any employee who has left employment with four or more years of service, and who has not withdrawn accumulated contributions, is eligible to receive the above benefit or can elect to receive a lump-sum refund of contributions with interest. An employee who terminates with less than four years of service and has not served continuously from the date of appointment to the age of 70 is only eligible for the lump-sum benefit.
Early Retirement	A member who is at least age 55 with four or more years of service may retire with the benefits described above reduced five percent for each year of retirement prior to age 65.
Disability Retirement	
Eligibility	Retirement by reason of permanent disability after completion of at least 10 years of service.
Monthly Benefit	Service retirement benefit determined as of the disability retirement date.

Summary of Plan Provisions (continued)

Pre-Retirement Death

Eligibility	No age or service requirements.
Benefit	A lump sum equal to two times the employee contributions with interest. If the employee is vested, the beneficiary can elect, in lieu of this lump sum, to receive a monthly benefit equal to the actuarial equivalent of the retirement benefit that would be due the employee as if the member had terminated on the date of death.

Contributions

Employee	9.22% of salary. Pursuant to Senate Enrolled Act No. 13, the employee contribution rate will increase to 11.47% on July 1, 2024.
Employer	14.50% of salary.
Interest	3.00% annually.

Cost-of-Living Improvements

W.S. 9-3-454 prohibits benefit changes, including cost-of-living increases, unless the funded ratio stays above 100% plus a margin for adverse experience throughout the life of the benefit change.

APPENDIX C

RISKS ASSOCIATED WITH MEASURING THE ACCRUED LIABILITY

Risks Associated With Measuring the Accrued Liability and Actuarially Determined Contribution

The determination of the accrued liability and the actuarially determined contribution requires the use of assumptions regarding future economic and demographic experience. Risk measures, as illustrated in this report, are intended to aid in the understanding of the effects of future experience differing from the assumptions used in the course of the actuarial valuation. Risk measures may also help with illustrating the potential volatility in the accrued liability and the actuarially determined contribution that result from the differences between actual experience and the actuarial assumptions.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions due to changing conditions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period, or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. The scope of an actuarial valuation does not include an analysis of the potential range of such future measurements.

Examples of risk that may reasonably be anticipated to significantly affect the plan's future financial condition include:

1. Investment risk – actual investment returns may differ from the expected returns;
2. Asset/Liability mismatch – changes in asset values may not match changes in liabilities, thereby altering the gap between the accrued liability and assets and consequently altering the funded status and contribution requirements;
3. Contribution risk – actual contributions may differ from expected future contributions. For example, actual contributions may not be made in accordance with the plan's funding policy or material changes may occur in the anticipated number of covered employees, covered payroll, or other relevant contribution base;
4. Salary and Payroll risk – actual salaries and total payroll may differ from expected, resulting in actual future accrued liability and contributions differing from expected;
5. Longevity risk – members may live longer or shorter than expected and receive pensions for a period of time other than assumed;
6. Other demographic risks – members may terminate, retire or become disabled at times or with benefits other than assumed resulting in actual future accrued liability and contributions differing from expected.

The effects of certain trends in experience can generally be anticipated. For example, if the investment return since the most recent actuarial valuation is less (or more) than the assumed rate, the cost of the plan can be expected to increase (or decrease). Likewise, if longevity is improving (or worsening), increases (or decreases) in cost can be anticipated.

The computed contribution rate shown on Table 1b may be considered as a minimum contribution rate that complies with the Board's funding policy. The timely receipt of the actuarially determined contributions is critical to support the financial health of the plan. Users of this report should be aware that contributions made at the actuarially determined rate do not necessarily guarantee benefit security.

Risks Associated With Measuring the Accrued Liability and Actuarially Determined Contribution

Plan Maturity Measures

Risks facing a pension plan evolve over time. A young plan with virtually no investments and paying few benefits may experience little investment risk. An older plan with a large number of members in pay status and a significant trust may be much more exposed to investment risk. Generally accepted plan maturity measures include the following:

	<u>January 1, 2024</u>	<u>January 1, 2023</u>
Ratio of the market value of assets to total payroll	5.0	4.6
Ratio of actuarial accrued liability to payroll	4.9	4.8
Ratio of actives to retirees and beneficiaries	1.4	1.6
Ratio of net cash flows to market value of assets	-1%	-1%
Duration of the actuarial accrued liability	10.1	10.2

Ratio of Market Value of Assets to Payroll

The relationship between assets and payroll is a useful indicator of the potential volatility of contributions. For example, if the market value of assets is 4.0 times the payroll, a return on assets 5% different than assumed would equal 20% of payroll. A higher (lower) or increasing (decreasing) level of this maturity measure generally indicates a higher (lower) or increasing (decreasing) volatility in plan sponsor contributions as a percentage of payroll.

Ratio of Actuarial Accrued Liability to Payroll

The relationship between actuarial accrued liability and payroll is a useful indicator of the potential volatility of contributions for a fully funded plan. A funding policy that targets a funded ratio of 100% is expected to result in the ratio of assets to payroll and the ratio of liability to payroll converging over time.

The ratio of liability to payroll may also be used as a measure of sensitivity of the liability itself. For example, if the actuarial accrued liability is 5.5 times the payroll, a change in liability 2% other than assumed would equal 11% of payroll. A higher (lower) or increasing (decreasing) level of this maturity measure generally indicates a higher (lower) or increasing (decreasing) volatility in liability (and also plan sponsor contributions) as a percentage of payroll.

Ratio of Actives to Retirees and Beneficiaries

A young plan with many active members and few retirees will have a high ratio of active to retirees. A mature open plan may have close to the same number of actives to retirees resulting in a ratio near 1.0. A super-mature or closed plan may have significantly more retirees than actives resulting in a ratio below 1.0.

Risks Associated With Measuring the Accrued Liability and Actuarially Determined Contribution

Ratio of Net Cash Flow to Market Value of Assets

A positive net cash flow means contributions exceed benefits and expenses. A negative cash flow means existing funds are being used to make payments. A certain amount of negative net cash flow is generally expected to occur when benefits are prefunded through a qualified trust. Large negative net cash flows as a percent of assets may indicate a super-mature plan or a need for additional contributions.

Duration of Actuarial Accrued Liability

The duration of the actuarial accrued liability may be used to approximate the sensitivity to a 1% change in the assumed rate of return. For example, duration of 10 indicates that the liability would increase approximately 10% if the assumed rate of return were lowered 1%.

Additional Risk Assessment

Additional risk assessment is outside the scope of the annual actuarial valuation. Additional assessment may include scenario tests, sensitivity tests, stochastic modeling, stress tests, and a comparison of the present value of accrued benefits at low-risk discount rates with the actuarial accrued liability.

Risk Measures – Low Default Risk Obligation Measure

Introduction

In December 2021, the Actuarial Standards Board (ASB) adopted a revision to Actuarial Standard of Practice (ASOP) No. 4, Measuring Pension Obligations and Determining Pension Plan Costs or Contributions. The revised ASOP No. 4 requires the calculation and disclosure of a liability referred to by the ASOP as the “Low-Default-Risk Obligation Measure” (LDROM). The rationale that the ASB cited for the calculation and disclosure of the LDROM was included in the Transmittal Memorandum of ASOP No. 4 and is presented below (emphasis added):

“The ASB believes that the calculation and disclosure of this measure provides **appropriate, useful information for the intended user regarding the funded status of a pension plan**. The calculation and disclosure of this additional measure is **not intended to suggest that this is the “right” liability measure** for a pension plan. However, the ASB does believe that **this additional disclosure provides a more complete assessment of a plan’s funded status and provides additional information regarding the security of benefits that members have earned as of the measurement date.**”

Comparing the Accrued Liabilities and the LDROM

One of the fundamental financial objectives of the Wyoming Judicial Retirement System (the Fund) is to finance each member’s retirement benefits over the period from the member’s date of hire until the member’s projected date of retirement (entry age actuarial cost method) as a level percentage of payroll. To fulfill this objective, the discount rate that is used to value the accrued liabilities of the Fund is set equal to the expected return on the Fund’s diversified portfolio of assets (referred to sometimes as the investment return assumption). For the Wyoming Judicial Retirement Fund, the investment return assumption is 6.80%.

The LDROM is meant to approximately represent the lump sum cost to a plan to purchase low-default-risk fixed income securities whose resulting cash flows essentially replicate in timing and amount the benefits earned (or the costs accrued) as of the measurement date. The LDROM is very dependent upon market interest rates at the time of the LDROM measurement. The lower the market interest rates, the higher the LDROM, and vice versa. The LDROM results presented in this report are based on the entry age actuarial cost method and discount rates based upon the intermediate rate from the FTSE Pension Discount Curve and Liability Index published by the Society of Actuaries. This rate is 4.80% as of December 31, 2023. This measure may not be appropriate for assessing the need for or amount of future contributions. This measure may not be appropriate for assessing the sufficiency of plan assets to cover the estimated cost of settling the plan’s benefit obligation.

The difference between the two measures (Valuation and LDROM) is one illustration of the savings the sponsor anticipates by taking on risk in a diversified portfolio.

Valuation Accrued Liabilities	LDROM
\$44,476,097	\$54,258,737
